# variables

## Naming and using variables

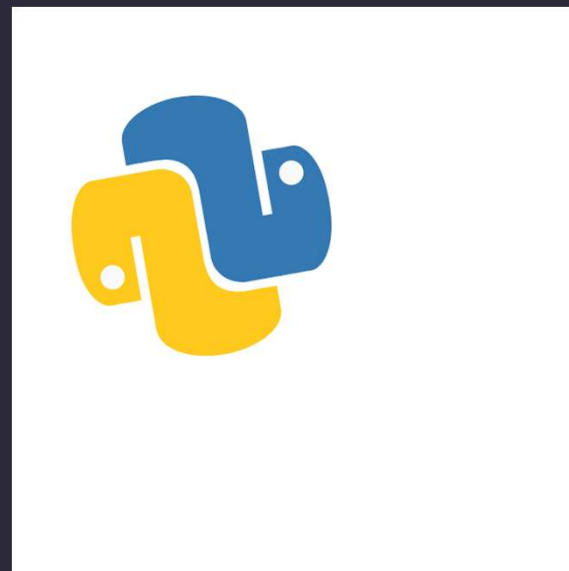

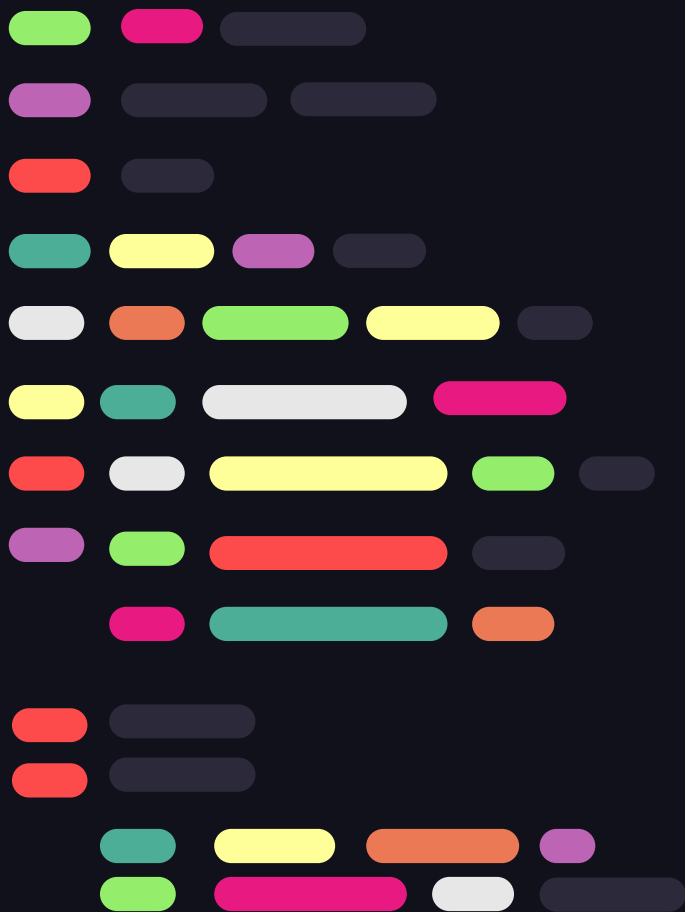

- Variable names can contain only letters, numbers, and underscores.
- Spaces are not allowed in variable names, but underscores can be used to separate words in variable names
- Avoid using Python keywords and function names as variable names.
- Variable names should be short but descriptive
- lowercase

myvariable  
my\_variable  
mi\_variable1

&operation  
1\_op

# Lab#1

#
