Python Methods vs Functions

METHODS

Associated with Objects.

Cannot invoke by its name.

Dependent on class.

Require 'self'.

VS

FUNCTIONS

Not associated with any objects

Can invoke by its name.

Independent.

Do not require 'self'.

ANATOMÍA DE UNA COMPRESIÓN DE LISTA EN PYTHON

Ejemplo 1 (Básico): Cuadrados

```
cuadrados = [x**2 for x in range(5)]
```

[0, 1, 4, 9, 16]

Ejemplo 2 (Con Filtro): Pares

```
pares = [x for x in range(10) if x % 2 == 0]
```

[0, 2, 4, 6, 8]
